$$\text{for } x \in (0, 1]; F(x) = \int_0^x (1-x)dx = x - \frac{x^2}{2} + \frac{1}{2} \quad (0.0.4)$$

from the equation we get

$$F(x) = \begin{cases} 0 & |x| > 1 \\ \frac{x^2}{2} + x + \frac{1}{2} & -1 \leq x < 0 \\ -\frac{x^2}{2} + x + \frac{1}{2} & 0 \leq x < 1 \end{cases} \quad (0.0.5)$$

Therefore the graph for the corresponding CDF is

GATE-EC Q.50

Q) The probability density function(PDF) of a random variable X is as shown in the fig. The corresponding cumulative distribution function (CDF) has the form

SOLUTION

The given PDF graph can be represented by the function $f(x)$.

$$f(x) = \begin{cases} 0 & |x| > 1 \\ 1 - |x| & |x| \leq 1 \end{cases} \quad (0.0.1)$$

Now, we need to find the corresponding CDF graph for $f(x)$. Let the CDF be represented by $F(x)$. We know that

$$F(x) = \int_{-\infty}^x f(x)dx \quad (0.0.2)$$

$$\text{for } x \in [-1, 0) : F(x) = \int_{-1}^x (1+x)dx = x + \frac{x^2}{2} + \frac{1}{2} \quad (0.0.3)$$
